 ACADEMIC YEAR 2024/2025

Slovakia is increasingly becoming a hub for technological innovation, particularly in the fields of information technology (IT) and artificial intelligence (AI), with growing investments in research, development, and AI-driven startups. The country has made significant strides in implementing AI in various sectors, from healthcare to manufacturing, and is fostering a robust ecosystem of tech companies and educational institutions dedicated to advancing AI and other emerging technologies. Efforts to integrate AI in public administration, enhance digital literacy, and develop AI-driven solutions

MISSIONS

LOADING...

Hello architect! My name is J. I will be your tutor in the waters of finance, calculations, analysis, everything related to architecture. To begin with, I want you to analyze the area. Analyze the surrounding schools, calculate the functional intensity evaluation, create a room calculation and graphically represent the volume they represent in relation to each other. Are you ready for this challenge?!

OBJECTIVES

1. ANALYZE THE SURROUNDINGS
2. CALCULATE THE FUNCTIONAL INTENSITY EVALUATION
3. FIND EXAMPLES FROM AROUND THE WORLD
4. STUDY ABOUT AI
5. LEARN ABOUT SKYRO

REWARDS

1. LEGENDARY J'S CALCULATOR

WHAT IS AI?

2024

DAILY USE

There are two main types of AI: narrow AI and general AI. Narrow AI, also called weak AI, is designed to perform specific tasks, like virtual assistants (Siri, Alexa), facial recognition, or recommendation algorithms. These systems are highly effective within their scope but cannot perform tasks outside their design. General AI, often referred to as strong AI, is a more advanced concept where the system would have the ability to understand and learn any intellectual task that a human can do. However, general AI does not yet exist and remains a long-term goal of AI research.

AI SCHOOLS

2024

NEW TREND?

In Europe, there is a growing number of educational projects and schools focusing on teaching artificial intelligence and technology. Here are some similar initiatives:

AI CAMPUS BERLIN, GERMANY

A learning and research center dedicated to fostering AI talent and innovation, offering courses, workshops, and collaborative opportunities for students and professionals alike.

AALTO UNIVERSITY, FINLAND

A global initiative with branches in cities like Paris and Lisbon, offering coding schools based on peer-to-peer learning and AI-driven education models without teachers or traditional classrooms.

42 NETWORK

A global initiative with branches in cities like Paris and Lisbon, offering coding schools based on peer-to-peer learning and AI-driven education models without teachers or traditional classrooms.

ECOLE 2600, France

A digital school in Paris that focuses on training the next generation in AI, data science, and emerging technologies using innovative, project-based learning models.

42 NETWORK

2024

Founded in Paris in 2013, today 42 has more than 15,000 students in 25 countries and is recognized as one of the best coding schools worldwide.

Learning at 42 is entirely free of charge and does not require any academic degree or coding experience. You only have to be at least 18 years old or be a high-school finalist to apply.

The school's practical approach, based on peer-to-peer collaboration, guarantees both excellent technical training and the development of valuable soft skills, such as the ability to work in teams, problem-solving, adaptation,

SKYRO

NEW FUTURE

Skyro School has over 10 years of experience in education, built upon the success of its partner organization, OpenLab, which has trained dozens of successful programmers and industry leaders. This expertise is now being transferred to their own high school, Skyro, with the goal of enabling students to grow and develop even faster in the fields of technology and innovation.

WHY BASE?

2024

SANCTUARY

The term base in games represents a safe zone, a sanctuary where players can rest, strategize, and feel protected from external threats. This idea resonates deeply with human psychology, making it an ideal metaphor for naming a school. By drawing on this association, the school becomes more than a physical space—it symbolizes emotional stability and security.

Etymologically, base signifies a foundation or support, aligning with essential human needs. According to Maslow's hierarchy, safety and security are fundamental, forming a cornerstone for personal development. Naming a school Base reflects these principles, fostering an environment where children feel anchored, supported, and free to explore their potential.

John Bowlby's theory of attachment introduces the concept of a "secure base," emphasizing a nurturing environment where children can confidently explore while having a reliable place to return to. A school named Base embodies this philosophy, offering a space for growth, belonging, and emotional reassurance.

By linking this concept to the gaming world, where young people instinctively associate bases with safety and success, the name becomes modern, relatable, and meaningful. A Base is not just a school—it's a starting point for exploration, a haven of security, and a symbol of growth, uniquely tailored to resonate with a generation shaped by both digital and real-world experiences.

CHALLENGES

2024

EQUIVALENCE

In many communities, education remains a fragmented experience, defined by invisible yet powerful barriers. Schools often reflect and reinforce societal divides—cultural, economic, and social—rather than bridging them. Children from marginalized communities, such as the local Roma population, frequently find themselves isolated, not by their potential, but by systemic biases and lack of opportunities. Meanwhile, private schools, often associated with exclusivity, inadvertently cultivate what psychologists term the rich kids syndrome: a detachment from reality, empathy, and the diverse perspectives that shape the real world.

This duality creates a troubling dynamic. On one side, children from privileged backgrounds are shielded within bubbles of comfort and uniformity. On the other, marginalized children face environments where they may feel unwelcome or unsupported, further perpetuating cycles of inequality. Education, meant to be a great equalizer, instead becomes a tool of division.

The question we face is this: How can we design a school that doesn't simply educate but also unites? A school that challenges these divisions and redefines what it means to belong.

This is where Base comes in—not as just another private institution but as a model of inclusion and connection. It seeks to address these problems by creating an environment that is open, accessible, and welcoming to all. By bridging the gap between communities, Base will redefine the educational experience, demonstrating that diversity is not a challenge to overcome but a strength to celebrate.

Unlike the X-Men's academy, which arose as a response to fear and exclusion, Base seeks to eliminate the conditions that make such isolation necessary. Here, no child is seen as "other." There are no hidden walls to protect them, no secrecy to shield their individuality. It's a place where the idea of belonging isn't conditional, where the community itself becomes a living testament to inclusion.

2024

2024

Hello, architect! My name is N. I like your idea, try to incorporate wooden elements. You're choosing cheerful colors well, which is perfect since it's a high school for young people. Overall, we need to shift the trend of school design to make it a more pleasant place where students enjoy coming. I'll write down some colors for you to use.

OBJECTIVES

USE:

1. OLIVE GREEN: NATURAL, STABLE, EARTHY, BALANCED, CALMING
2. PURPLE: CREATIVE, LUXURIOUS, BOLD, DEEP, IMAGINATIVE
3. GRAY: NEUTRAL, MODERN, MINIMALIST, CALM, ELEGANT
4. PINK: PLAYFUL, JOYFUL, WARM, FRIENDLY, FUN
5. BLUE: CALM, INTELLIGENT, CLEAR, REFRESHING, FOCUSED
6. ORANGE: ENERGETIC, VIBRANT, WARM, CREATIVE, DYNAMIC
7. YELLOW: OPTIMISTIC, BRIGHT, CHEERFUL, LIVELY, COMMUNICATIVE

REWARDS

MISSIONS

✕
 Hello architect, my name is Quadratus, son of Triangulus. I will be your assistant in the design that will be your cornerstone. Have you ever heard of a perfect square? Using mathematics, I have determined that the optimal axial length of the room is 8.1 meters. It will fit just enough philosophers and mathematicians. In your case, those would be students. It is generally recommended to have rooms where the area per student ranges from 1.8 to 2.5 m². However, you, architect, are a generous builder, so with my perfect square, you'll get 2.5 to 3 m² per student, ensuring they feel comfortable in the classroom.

OBJECTIVES

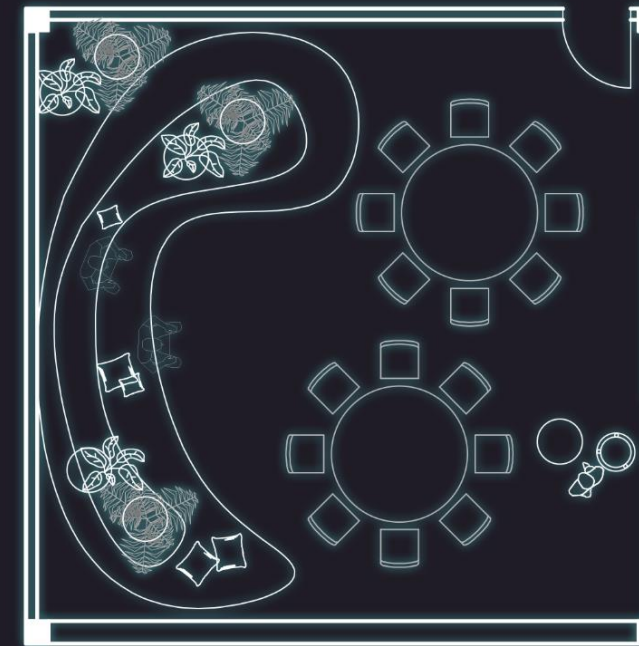

1. CREATE THE IDEAL CLASSROOM
2. ASSEMBLE THE BASIC STRUCTURE AND LAYOUT OF THE BUILDING FROM THE SHAPE OF THE IDEAL CLASSROOM
3. SAVE THE SURROUNDING GREENERY

VISION

2024

PIXEL

2024

Historically, the square has symbolized order and balance, dating back to ancient Greece, where geometric shapes like squares represented stability. In the digital realm, the pixel, a modern interpretation of this shape, continues to represent a stable foundation for constructing visual content.

A pixel is the fundamental building block of the digital world, much like how binary code is constructed from ones and zeros. Each pixel, a small square, plays a vital role in creating complex images, games, and visual experiences, much like how binary code forms complex data.

The origin of the word "pixel" comes from the English term "picture element," which literally means "a component of an image." This fundamental building block of visual displays now forms everything from static images to moving visuals. Each pixel acts like a single zero or one in binary code - a small yet essential element that plays its part in the larger digital picture.

Designing a school using pixels to building with binary code — small, essential units that form a larger whole. Just as binary code combines ones and zeros to create meaningful data, pixels combine to create an organized, harmonious space. This school, made of pixels, provides a stable and structured environment, offering students a sense of order and belonging, while promoting creativity and growth.

Incorporating the concept of pixels and games into everyday school life can have a significant positive impact on students' learning experiences. Just as pixels form the building blocks of digital images and games, they can be used as a metaphor for how small, individual actions or ideas come together to create something larger, like the learning process itself.

Games are built around pixels, each one representing a small part of a bigger picture. In a school setting, this could be translated into how each student's learning experience and contributions form the larger educational environment. By visualizing the classroom as a "game," students can understand the value of every small effort, just as each pixel plays a crucial role in forming a cohesive image.

MISSIONS

Hello architect, my name is M. I will be your mentor. I see that you are using the advice given to you by QUADRATUS. From my modern and experienced perspective, it's a genius solution; you can utilize the modularity of these blocks or, as we call them in modern times, pixels. So, if the investor decides to extend the building, they simply connect to the existing grid, just like that! However, be careful not to let these pixels disappear from the floor plans. I recommend that you approach the interior design of the classrooms unconventionally, not like in Quadratus' time when they used chalk on blackboards, but modernly, whether it's furniture, desks, or the arrangement of the desks.

OBJECTIVES

1. DESIGN IDEAL FLOORS
2. CREATE UNCONVENTIONAL CLASSROOMS
3. HIGHLIGHT THE PIXEL AND CREATE AN INTERESTING FACADE.

2024

2024

Hello architect, my name is MI. I see that M has given you great advice. I noticed you're looking for a place to position the gymnasium. What if you placed it underground? You could raise the height by two floors to meet the gym height standard. In your case, this will also create an interesting meeting space, connecting the interior with the exterior in a way that football players, who rent the field in the evening, can change in the locker rooms without going through the school interior. They can simply go down exterior stairs. Additionally, these stairs would serve as seating, allowing people to watch their children's competitions from outside.

OBJECTIVES

1. FIND A PLACE FOR A SCHOOL GYM
2. VISUALLY CONNECT THE INTERIOR AND EXTERIOR
3. CREATE LOCKER ROOMS FOR THE GYM

ACCEPT MISSION

VISION

Historically, the square had been used for outdoor activities and leisure, giving birth to a vibrant community. The project aims to restore this legacy by creating a modern, multi-functional space that respects the site's heritage while embracing contemporary urban design.

A plan to the fundamental building blocks of the digital world, such as the low-altitude, high-speed, and high-capacity network. Each plan is a digital building block, and the project is a digital building block. The project is a digital building block, and the project is a digital building block.

The origin of the word "pixel" comes from the Greek word "picture element" which means the smallest unit of an image. The project is a digital building block, and the project is a digital building block.

Designing a digital building block is like building with letters. Each letter is a building block, and the project is a digital building block. The project is a digital building block, and the project is a digital building block.
